Technology

This term, the 3-6 class has been working on making a board game with a partner. We played some games from other people’s houses and got some ideas from the games we played. One of my ideas was having a chance card that, if you ran away from school, you were out of the game.

With our game it has to be about the school and the three most important rules: Best Effort, Be Safe and Be Respectful. The game that we are looking at the most is Monopoly. Most of the kids are using the ideas of Monopoly.

For the chance cards, there are negative and positive cards. For the middle of the board we decorate it with what the game is about. For example, for steam trains you would add a train, for flowers you would add flowers. Almost every one did the squares all around the outside of the board but two people did a wobbly circle.

Danica Year 4

The Technology Project

This term we are making a board game for Technology and we are working in pairs. We have played some different games so now we have a better idea of what we are doing. The teacher helping us with this Technology project is Ms Sherman. It’s really fun.

From Tommy, Year 5

Technology this term

In Technology this term, we are making a board game in pairs. I think this term of Technology will be really fun because we can take our board games home after and play them with our family.

I think it is a really great idea that we got to play board games in class. This is the best Technology unit we have ever done because we do not have to do a lot of cleaning up afterwards. It is not fun when we have to do a lot of cleaning up and it is great when we don’t have a lot to clean.

So far this is the best technology we have done with Ms Sherman since she has been here.
